# NON-TOXIC WHOLESOME LIGHTING

PURITY..CLEANLINESS...QUALITY

Paramount Industries, Inc. meets or exceeds the most stringent of requirements for equipment suitable for use in commercial food processing and handling applications.

Our luminaires are expressly designed to assure that bacteria and molds have no crevices or recesses in which to thrive. Surfaces are constructed of a non-toxic material, and all openings are sealed or gasketed.

NSF International provides third party testing and certification services to the food equipment industry relating to public health, sanitary and environmental conditions. Public health officials and other regulatory communities recognize NSF's formally registered Mark.

The listing program for food equipment materials and finishes provides a list of materials which meet minimum sanitation requirements for four (4) applications (as defined by NSF Criteria C-2).

## HID AND FLUORESCENT

Institutional food handling Splash Zone  
San Francisco, CA

**1. Food zone** – Surfaces which the food normally contacts, and those surfaces from which the food may drain, drip or splash back onto surfaces normally in contact with food.

**2. Heated Food Zone** – similar to Food Zone.

**3. Splash Zone** – Surfaces other than the food zone which are subjected to routine splash, spillage or other soiling during normal use.

**4. Non Food Zone** – All exposed surfaces other than food or splash.

To simplify the processes of determining what rating is necessary on the luminaire required for the illumination of food applications, Paramount established two (2) product categories (based on NSF's definitions) for their luminaires, Food Zone and Splash Zone / Non Food Zone.

PURITY...CLEANLINESS...QUALITY  
...PARAMOUNT... the clear choice.
