

## ***GARAGE & CANOPY LIGHTING PROVIDES SUPERIOR ILLUMINATION!***

Paramount has the right luminaire to meet all of your lighting needs. Every luminaire is designed to meet the unique challenges of modern spaces in harsh and abusive conditions. Paramount offers a comprehensive solution for enhancing safety, visibility, and advanced technology for modern parking and public facilities!

### **Purpose**

Garage & Canopy luminaires provide bright, uniform, and energy-efficient illumination for safety and task performance in various indoor and semi-outdoor settings. These durable, low-maintenance luminaires are designed to withstand harsh environmental conditions while offering significant long-term cost savings. These luminaires typically feature slim, weatherproof designs that deliver uniform, bright, and low-glare light.

### **Key Features and Benefits**

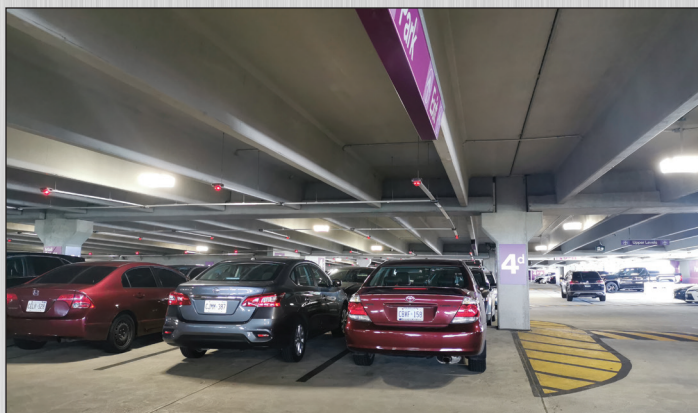

**Energy Efficiency:** LED lights consume significantly less power (up to 80% less) than traditional options like metal halide or fluorescent bulbs, leading to lower electricity bills and a reduced carbon footprint.

**Enhanced Visibility and Safety:** They offer superior color rendering and provide bright, high-quality, and uniform light coverage, which eliminates dark spots and shadows to improve safety, security and visibility in areas like parking garages, loading docks, and walkways.

**Durability and Weather Resistance:** Luminaires are built with robust, often die-cast aluminum housings with sealed optics (generally IP65 or higher ratings) to resist dust, moisture, temperature extremes, and corrosion, making them ideal for challenging environments.

**Instant Start and Quality Light:** Unlike some traditional lighting, LEDs turn on instantly, even in cold temperatures, and do not produce annoying flickering or humming. They offer better color rendering, making details appear clearer.

**Optimized Distribution:** Many luminaires feature specialized lenses to provide wide, even light distribution specifically for low-mounting heights in parking structures. They can often be linked together for continuous, even light coverage across a large area. These sealed and gasketed luminaires are specifically designed for environments where moisture, dust, or dirt are prevalent.

### **Applications**

Paramount's Garage & Canopy Lite Series are ideal for environments requiring powerful, reliable, and efficient overhead lighting in many environments such as:

- Parking Garages
- Gas Stations & Service Bays
- Loading Docks & Walkways
- Residential Carports
- Car & Truck Wash Facilities
