

HIGH PERFORMANCE LIGHTING IS ON THE MOVE!

Paramount's high quality lighting has been used by the Transportation Industry since 1949. Our experience and design capabilities mean that architects and lighting designers can count on us to produce special luminaires to meet any lighting challenge!

Innovative Designs

Different styles of luminaires enhance the individual quality of the spaces they light. Standard or custom work, our units meet the design challenges and generate high levels of illumination. Contemporary designers are using Paramount to achieve dramatic lighting effects.

Quality Materials

Stainless steel, extruded aluminum, tempered glass, borosilicate glass, and other heavy-duty materials and sealants are used to insure that these luminaires are vandal-resistant as well as impervious to the weather or other environmental hazards. Every luminaire also receives the same high level of finish to enhance appearance.

Applications

Paramount's high performance lighting is designed to excel in your most demanding mass transit situations.
